Issue ID: 001

Module: Login

Description: Error message displayed when a user tries to sign in using wrong user credentials is not understandable

Steps to reproduce:

1. User navigates to petshop website

2. User clicks on Login button on the page header

3. User enters an email address not registered in petshop website

4. User enters a password

5. User clicks on login button on the login form

Expected output: User should see a meaningful and understandable error message Such as "Email address or password is incorrect"

Actual Output: User sees an error message in Jason formate - "{ "success": 0, "data": [], "error": "Failed to authenticate user", "errors": [], "trace": [] }"
